ELSEVIER

Operations Research Letters 20 (1997) 249–250

operations research letters

Author Index to Volume 20

The issue number is given in front of the page numbers

Abate, J. and W. Whitt, Limits and approximations for the M/G/1 LIFO waiting-time distribution (5) 199–206
Ahuja, R.K. and J.B. Orlin, Equivalence of the primal and dual simplex algorithms for the maximum flow problem (3) 101–108
Altman, E. and S. Foss, Polling on a space with general arrival and service time distribution (4) 187–194
Bourjolly, J.-M., G. Laporte and H. Mercure, A combinatorial column generation algorithm for the maximum stable set problem (1) 21– 29
Boyd, E.A., A fully polynomial epsilon approximation cutting plane algorithm for solving combinatorial linear programs containing a sufficiently large ball (2) 59– 63
Bretthauer, K.M. and B. Shetty, Quadratic resource allocation with generalized upper bounds (2) 51– 57
Cominetti, R. and C. Michelot, Sufficient conditions for coincidence in ℓ_1-minisum multifacility location problems (4) 179–185
De Klerk, E., C. Roos and T. Terlaky, Initialization in semidefinite programming via a self-dual skew-symmetric embedding (5) 213–221
Dosios, K. and K. Paparrizos, Resolution of the problem of degeneracy in a primal and dual simplex algorithm (1) 45– 50
dos Santos, J.L.E., *see* Martins, E.Q.V. (4) 195–198
Foss, S., *see* Altman, E. (4) 187–194
Foul, A., A characterization of an n by $2n$ "Q_0"-matrix (1) 39– 44
Goffin, J.-L., P. Marcotte and D. Zhu, An analytic center cutting plane method for pseudomonotone variational inequalities (1) 1– 6
Hamacher, H.W. and A. Schöbel, A note on center problems with forbidden polyhedra (4) 165–169
Kanzow, C., A new approach to continuation methods for complementarity problems with uniform P-functions (2) 85– 92
Kovalyov, M.Y. and F. Werner, A polynomial approximation scheme for problem $F2/r_j/C_{\max}$ (2) 75– 79
Kuno, T. and T. Utsunomiya, Minimizing a linear multiplicative-type function under network flow constraints (3) 141–148
Laporte, G., *see* Bourjolly, J.-M. (1) 21– 29
Lee, C.-Y., Minimizing the makespan in the two-machine flowshop scheduling problem with an availability constraint (3) 129–139
Liao, A., Modifying the BFGS method (4) 171–177
Marcotte, P., *see* Goffin, J.-L. (1) 1– 6
Martins, E.Q.V. and J.L.E. dos Santos, An algorithm for the quickest path problem (4) 195–198
Mercure, H., *see* Bourjolly, J.-M. (1) 21– 29
Michelot, C., *see* Cominetti, R. (4) 179–185
Nelson, B.L., B.W. Schmeiser, M.R. Taaffe and J. Wang, Approximation-assisted point estimation (3) 109–118
Orlin, J.B., *see* Ahuja, R.K. (3) 101–108
Paparrizos, K., *see* Dosios, K. (1) 45– 50
Provan, J.S., On finding two-connected subgraphs in planar graphs (2) 81– 84

Elsevier Science B.V.

Qi, L., On superlinear convergence of quasi-Newton methods for nonsmooth equations (5) 223–228
Roos, C., *see* de Klerk, E. (5) 213–221
Scheithauer, G. and J. Terno, Theoretical investigations on the modified integer round-up property for the one-dimensional cutting stock problem (2) 93–100
Schmeiser, B.W., *see* Nelson, B.L. (3) 109–118
Schöbel, A., *see* Hamacher, H.W. (4) 165–169
Shetty, B., *see* Bretthauer, K.M. (2) 51– 57
Sox, C.R., Dynamic lot sizing with random demand and non-stationary costs (4) 155–164
Spector, Y. and D. Zuckerman, Expenditure patterns and timing of patent protection in a competitive R&D environment (5) 237–242
Stadje, W., Asymptotic normality of discounted random series with applications in reliability and queueing (5) 229–235
Taaffe, M.R., *see* Nelson, B.L. (3) 109–118
Tautenhahn, T. and G.J. Woeginger, Minimizing the total completion time in a unit-time open shop with release times (5) 207–212
Terlaky, T., *see* de Klerk, E. (5) 213–221
Terlaky, T., *see* van Maaren, H. (1) 15– 20
Terno, J., *see* Scheithauer, G. (2) 93–100
Tsang, E. and C. Voudouris, Fast local search and guided local search and their application to British Telecom's workforce scheduling problem (3) 119–127
Utsunomiya, T., *see* Kuno, T. (3) 141–148
van Eijl, C.A. and C.P.M. van Hoesel, On the discrete lot-sizing and scheduling problem with Wagner–Whitin costs (1) 7– 13
van Hoesel, C.P.M., *see* van Eijl, C.A. (1) 7– 13
van Maaren, H. and T. Terlaky, Inverse barriers and CES-functions in linear programming (1) 15– 20
Vickson, R.G., On the probability distribution of total quality under sublot inspection and process restoration (5) 243–247
Voudouris, C., *see* Tsang, E. (3) 119–127
Wang, J., *see* Nelson, B.L. (3) 109–118
Webster, S.T., The complexity of scheduling job families about a common due date (2) 65– 74
Werner, F., *see* Kovalyov, M.Y. (2) 75– 79
Whitt, W., *see* Abate, J. (5) 199–206
Woeginger, G.J., *see* Tautenhahn, T. (5) 207–212
Woeginger, G.J., A polynomial-time approximation scheme for maximizing the minimum machine completion time (4) 149–154
Zhang, W., A note on the complexity of the Asymmetric Traveling Salesman Problem (1) 31– 38
Zhu, D., *see* Goffin, J.-L. (1) 1– 6
Zuckerman, D., *see* Spector, Y. (5) 237–242
